INTRODUCTION

- For nutrition services to be universal, they need to guarantee equitable access.
- There is a need to delve into the complexities surrounding real access to state services for temporary migrants
- Critical to understand how temporary work-related migration impacts access to Integrated Child Development Services.
- The study explores the multifaceted challenges faced by both migrants and frontline workers

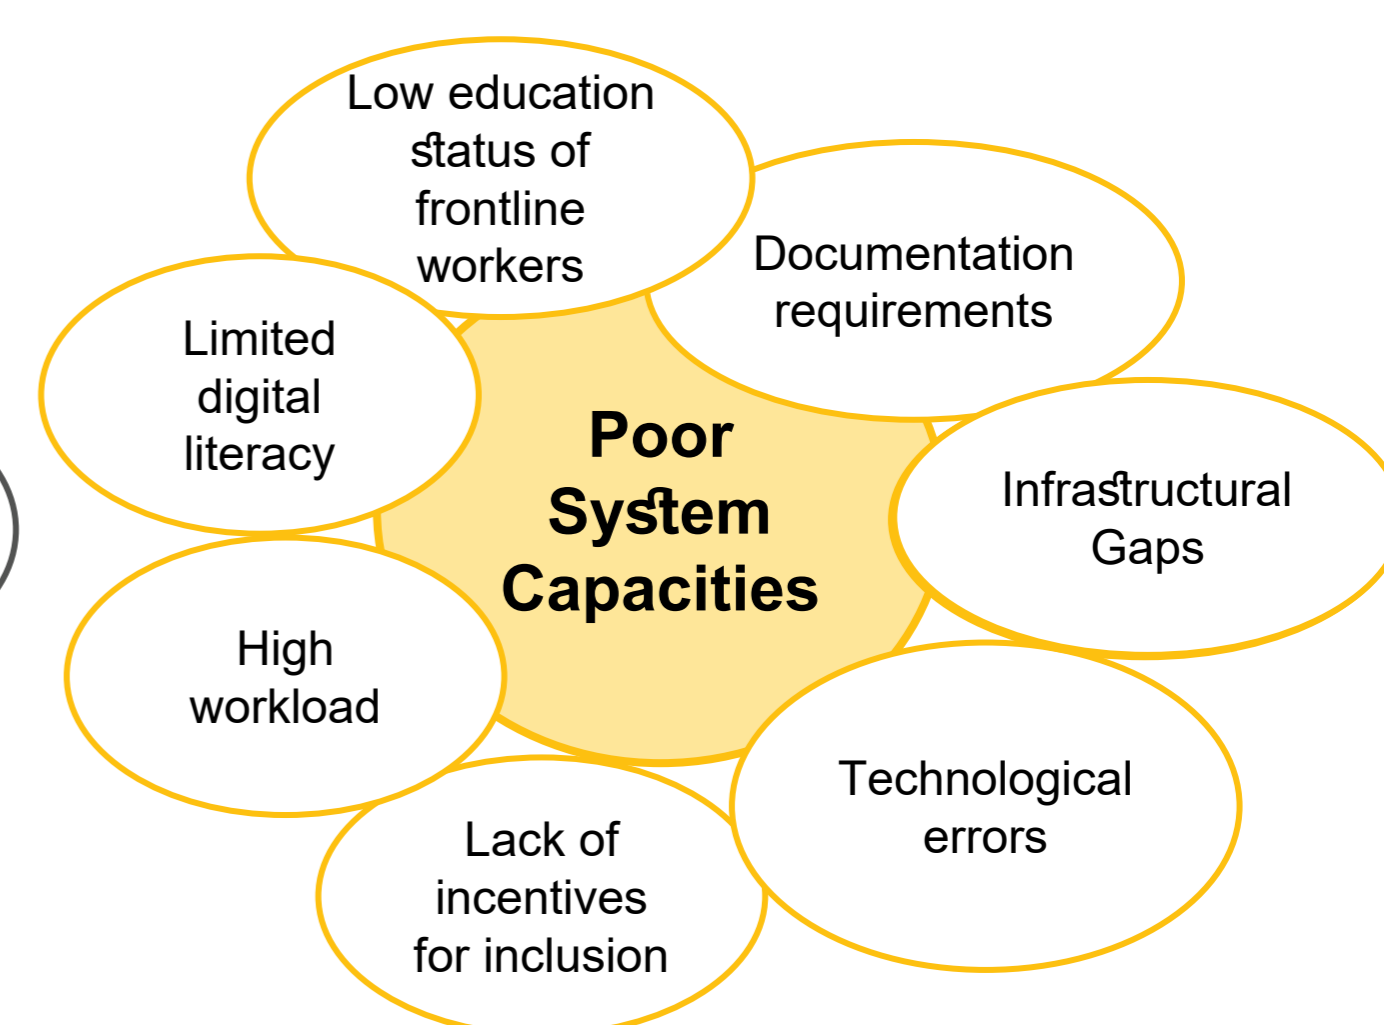

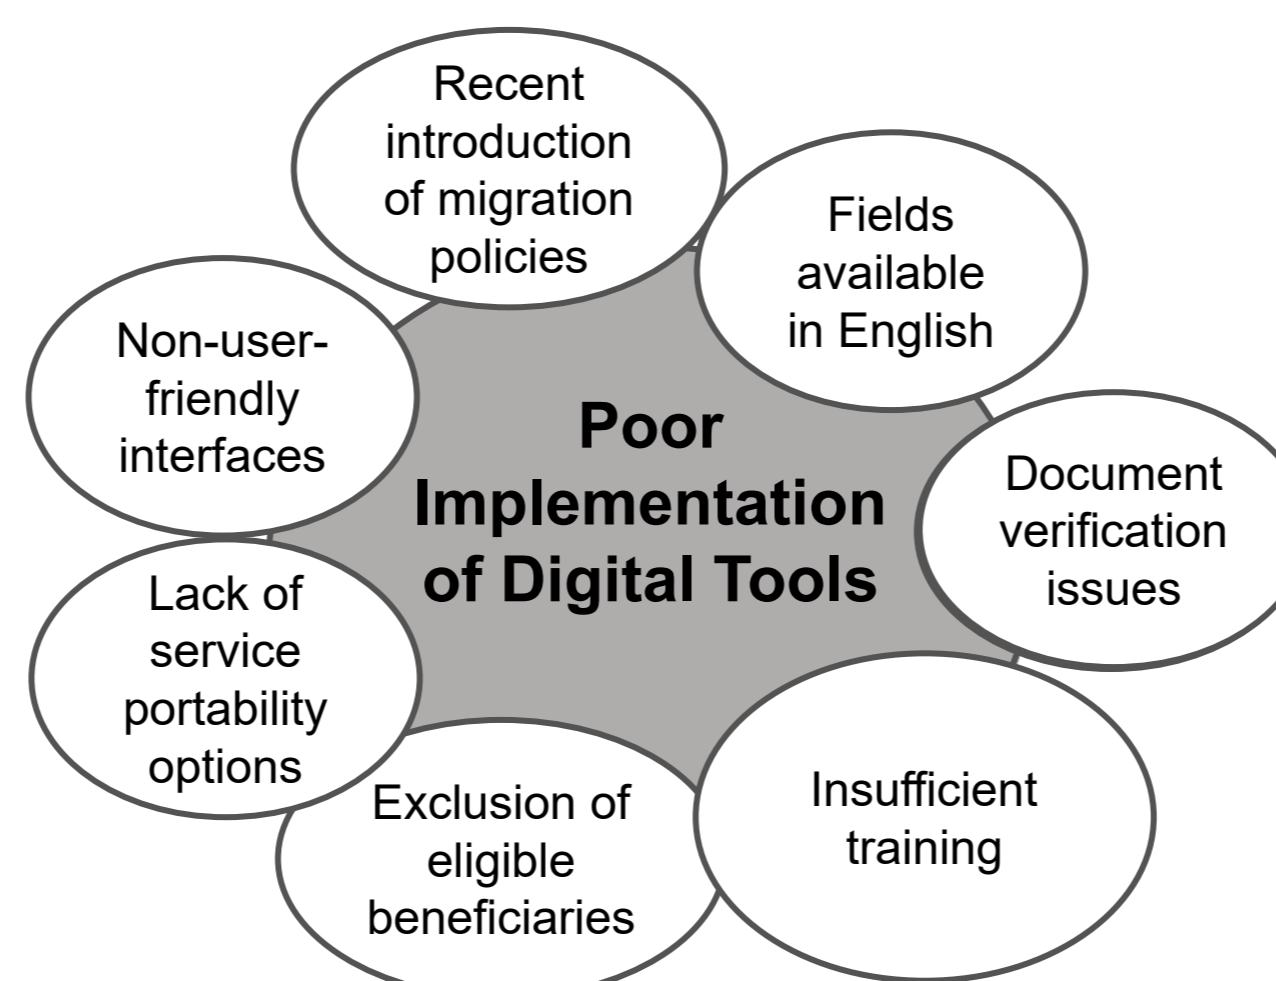

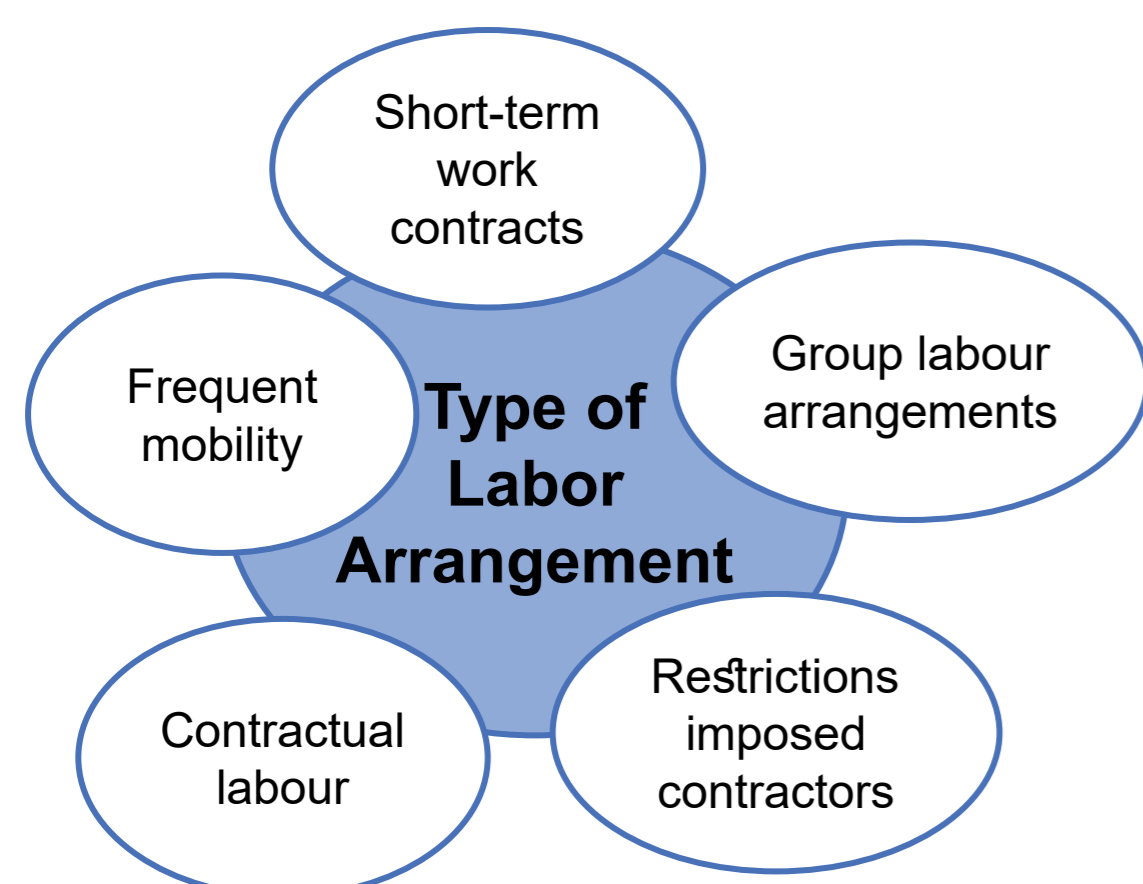

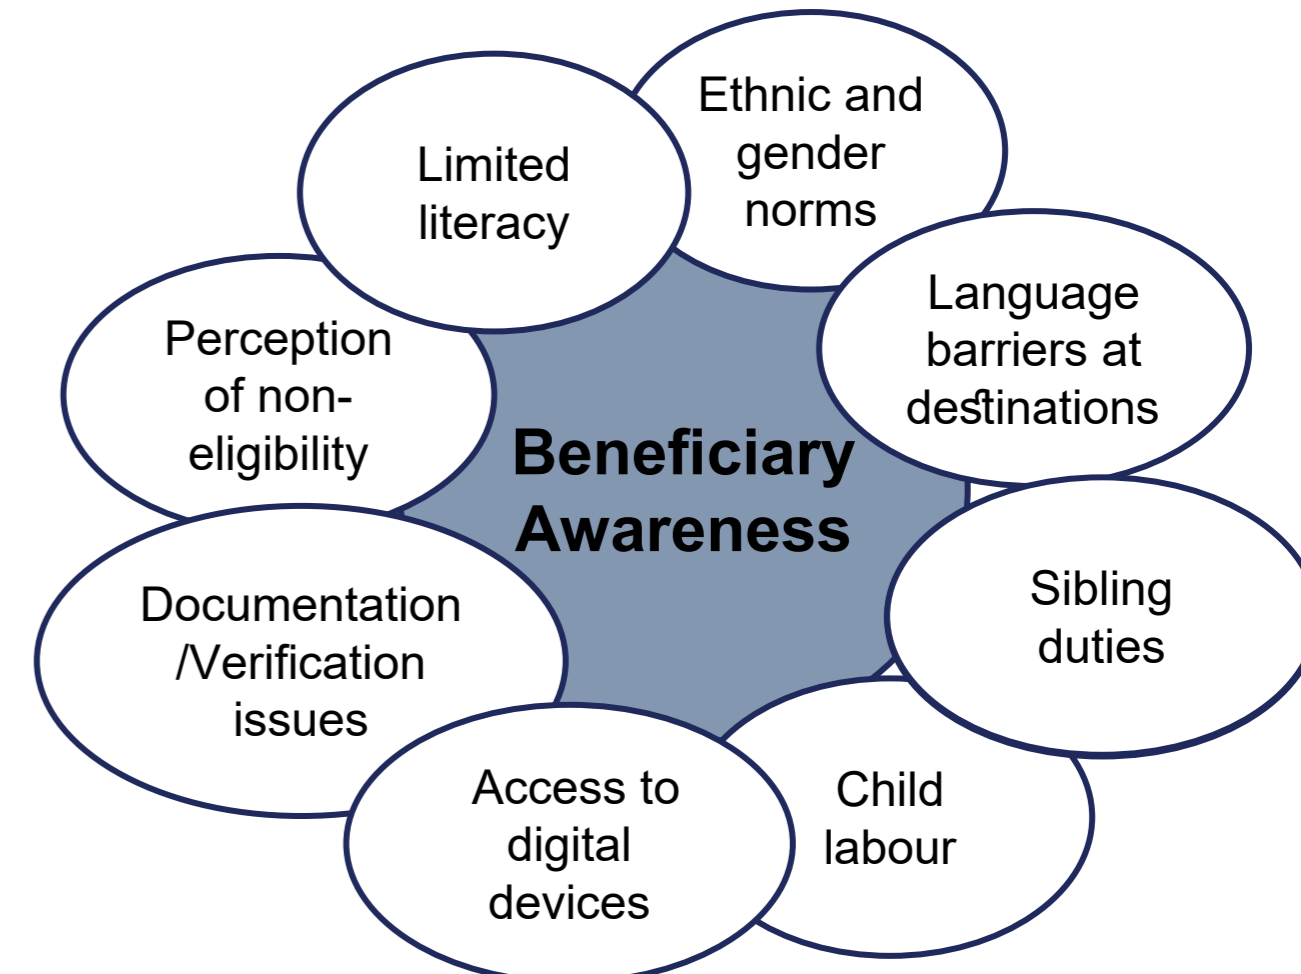

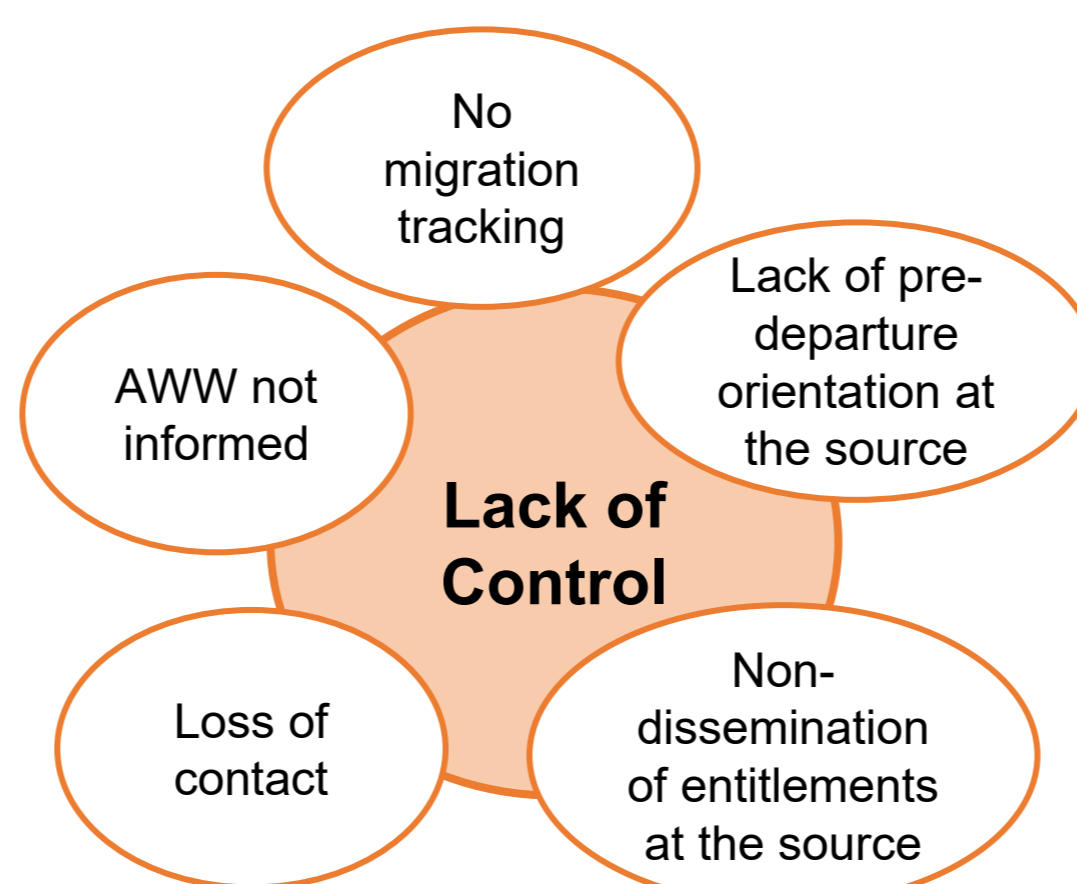

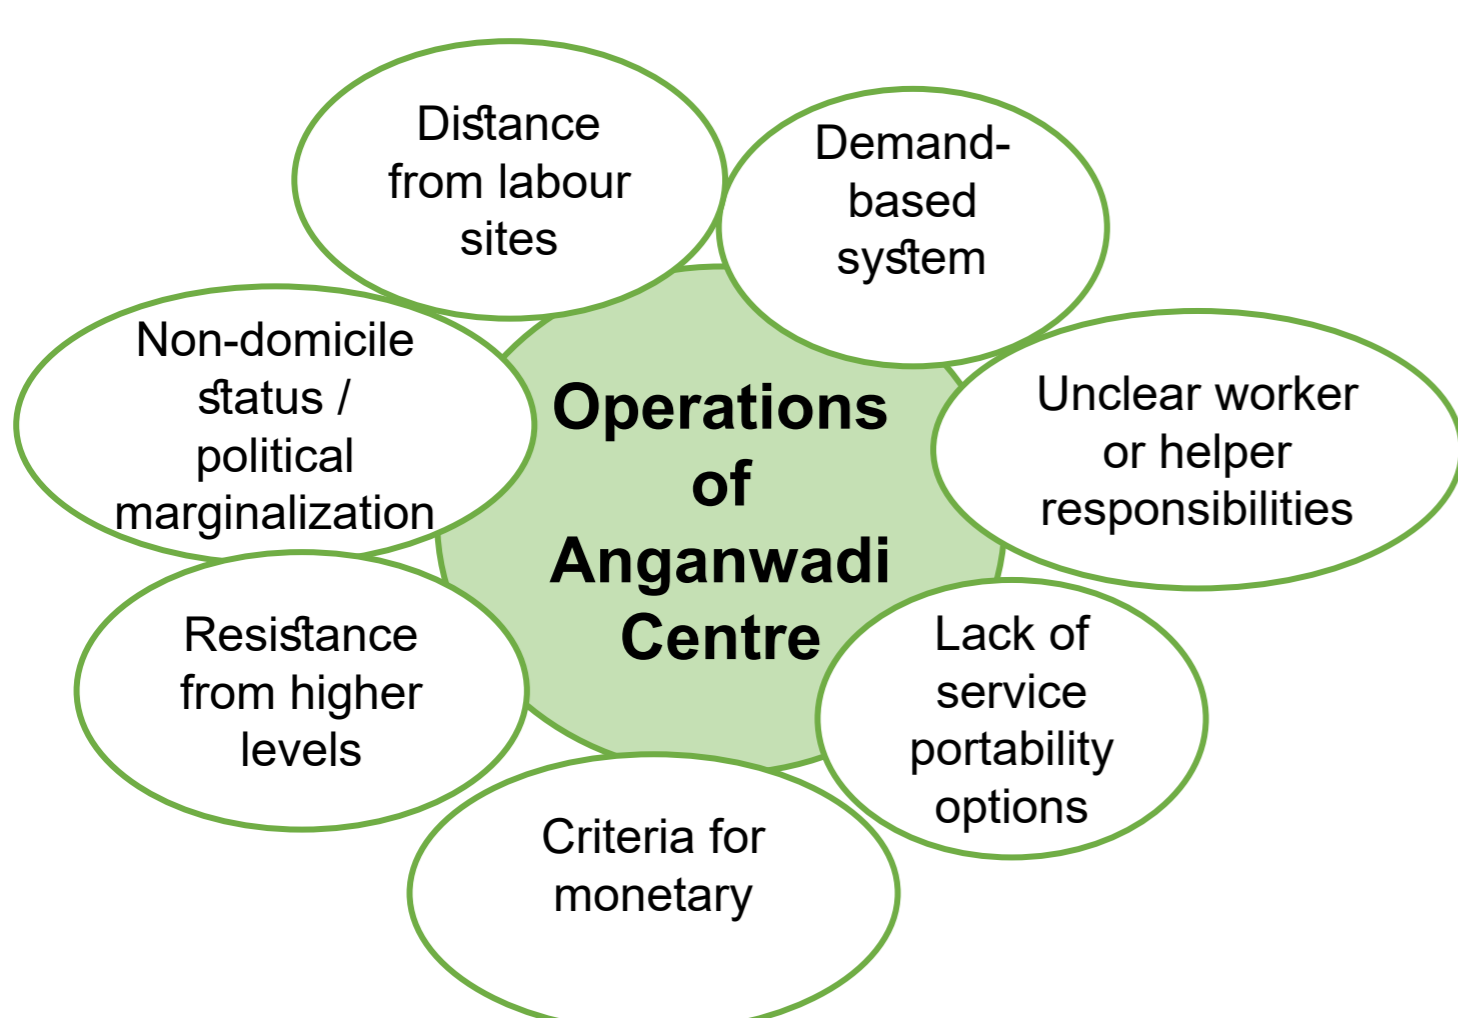

METHODOLOGY

- Use of ethnographic approach: interviews, participant observation and field work.
- Conducted document analysis
- The study focuses on two key states: Maharashtra, a major destination for inter-state migrants, and Bihar, a significant source state with high outmigration.

STUDY AREA

RESULTS

Adolescent marriage

Child malnutrition

Anaemia

Child morbidity

CONCLUSION

- Complex socio-political realities and systemic gaps evident at different levels
- System strengthening critical even for successful implementation of digital tools.
- This study emphasizes a transition from monitoring and enumeration to prioritizing service provision.
